Project Spotlight: Orbyline

The A.I. Atelier

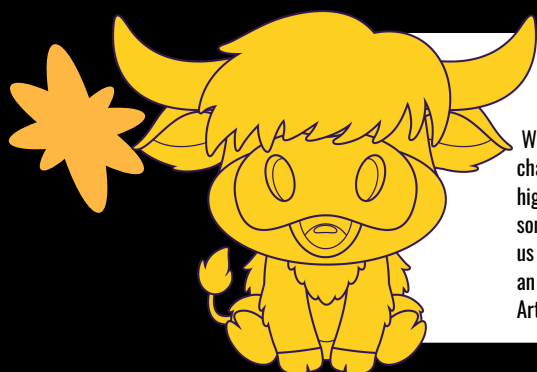

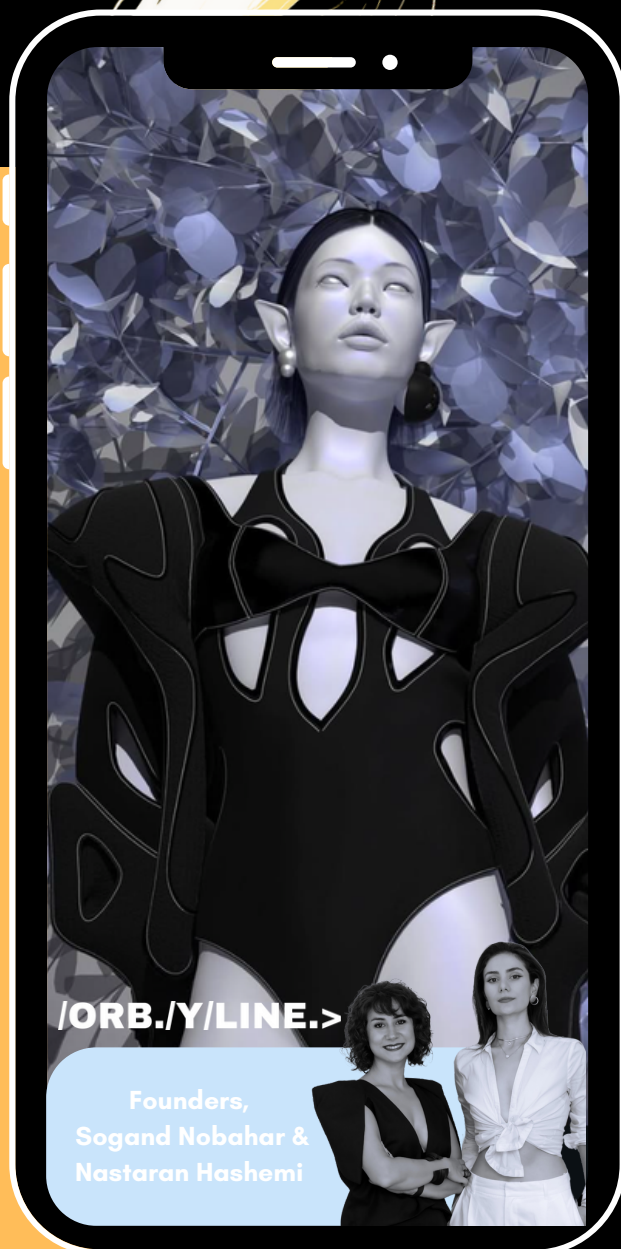

In 2025, the artificial and the augmented are all around us, and are (increasingly) changing the fabric of our reality and lives. What isn't as available to the masses at the moment, is the understanding or applicable use cases of how this ever-expanding technology will help humanity close sensory gaps between the technical and the tangible. Ironically enough, the missing thread might just be found in fashion.

Sogand Nobahar and Nastaran Hashemi are Italian Creatives who are the Co-Founder and Co-Creative Director of Orbyline, a design studio and wardrobe collection that produces pieces in collaboration with A.I. and are meant to be perceived on the wearer with the use of A.R. (augmented reality). Whether chic, metallic earrings (pictured below) sleek and sporty jumpsuits (pictured in the article thumbnail), or ethereal body jewelry that can rival accessories found in Queen Amidala's closet, Orbyline is making waves, and creating ways to bring the worlds of haute couture and web3 together...

ABOUT ECO(S)

Web3 would be nothing without the communities of people who take action and initiate change, on-chain and off. Introducing #ECO(s) by The Fuzzy Cow Podcast, a feature series and newsletter that highlights the people and communities making waves on some of the chains you've heard of (and some you haven't) while exploring how their passions and projects ripple into real world innovation for us all. Our first community series is presented by Octant; an app, public goods platform and community within the Ethereum ecosystem. Artwork by Chris Calo

HEAR FROM THE ECO

Hailing from the Dominican Republic, Wasabi is an Entrepreneur and member of Kokonut network, an agricultural DAO devoted to utilizing natural resources and farmland to expose and acclimate members into engaging with regenerative finance models on the Gnosis blockchain. Though Wasabi has never ventured from his island oasis in the D.R., he is a well-traveled citizen of blockchains' global ecosystem, where he has interacted with tokenomics since before Bitcoins' whitepaper was published and been a part of various communities since 2021.

In a classic example of rejection being a compass for redirection, Wasabi first learned about Octant when they initially launched their app. However, it wasn't until he applied to the 3rd funding round (known as Epochs) on the platform and had his application denied that he was invited to by Octants' Community Manager to contribute something more substantial to the Octant community overall.

Today, Wasabi serves as a Community Council Member for Octant's Community Fund, and has helped decide the company's grant recipients for the last two seasons. Asked to reflect on how he sees Octant contributing to Ethereum's ethos and larger mission he says:

"I think Octant is in a unique position to help bolster the Ethereum and Public Goods Ecosystem as a whole due to its elite team and the maturity in operations they inherit[ed] from the Golem Foundation." He adds; "...The fact they're funding builders using the yield from its Staked ETH give them a lot of room for experiments and to optimize for the community rather than optimize for their product, because unlike many other players they're not selling you into a specific product."

To learn more about Wasabi and his work with Kokonut Network be sure to visit the site using the qr code below:

ABOUT Octant

Octant is an app that allows users to give and gain more from their involvement in funding social goods.

Developed in 2023, The Octant App is an ecosystem and mobile application built on the Ethereum blockchain that utilizes its own native token, GLM to have community members invest in and uplift projects requesting sponsorship for further development within and outside of their community. To learn more about how Octant works, or to join the platform and get started as a donor visit the website here:
